ABSTRACT

Information on the geographic and institutional origins of students at Arkansas state and independent colleges and universities in the fall 1980 are presented in the first analytic report on these topics. Geographic origin is the legal residence of a student when admitted to an institution, and the institutional origin of undergraduate transfer students, graduate students, and first professional students is the institution a student attended prior to enrollment at the current institution. With two exceptions, all of the state four-year institutions drew most of their first-time entering students from surrounding counties. At least three percent of the students were attracted from the surrounding counties and smaller proportions of students were attracted from out of state. The community colleges and Southern Arkansas University, El Dorado Branch, drew intensely from a small group of counties. They drew three percent or more of the high school graduates from only one to six counties, but these accounted for more than 75 percent of their first-time entering enrollment. Generally, the independent four-year institutions attracted three percent of the high school graduates from fewer Arkansas counties, but drew more heavily from other Arkansas counties and from other states. However, out-of-state students at independent colleges ranged from eight percent to 77 percent. When the data are arranged by county to show approximate percentages of higher education, wide variations among the counties are revealed. Most state institutions attracted the largest numbers of entering graduate and first professional students from their own graduates while the smaller graduate programs at the independent institutions attracted students from other institutions. GEOGRAPHIC AND INSTITUTIONAL ORIGIN OF ARKANSAS COLLEGE STUDENTS, FALL 1980

REPORT 80-6

JOANNE BRANSCUM
Research Analyst

September, 1981

Foreword

This report is one of the regular series of analytical reports published annually by the Arkansas Department of Higher Education (ADHE) based on data collected through the Arkansas Higher Education Information System (AHEIS). While the enrollment of first-time-entering and total students has been collected in essentially this same form for several years, this is the first year for the collection of data on the institutional origins of undergraduate transfer students and graduate students. Data systems at five institutions were inadequate to provide the institutional origin data this first year, but all of them anticipate providing these data in the future and the analyses possible should improve with more complete reporting. Because the University of Arkansas at Fayetteville was among these, however, the analysis of intra-state transfers is unfortunately limited.

The numbers of first-time-entering students drawn from each county are important elements in the projection of enrollments for institutions of higher education. Since the proportions of high school graduates attracted from each county tend to be relatively stable from year to year, anticipated proportions attracted can be multiplied by projected high school graduates to project beginning students.

The transfer relationships between institutions which are beginning to be identified in this report are both interesting and important. As historical data are developed, it may become possible to project transfer enrollments for institutions through analyses of these data. Clearly, the data help identify those institutions which need to establish successful articulation practices for the good of their students and effective use of resources.

As mentioned, this is the first analytic report published on these topics. Clearly more complete responses from the institutions will support more thorough analysis of each institution's sources of students and of the paths those students make to other institutions.

Further, it is likely that suggestions from readers will help identify other analyses and suggestions for improvement are earnestly invited.

We continue to appreciate the assistance gained from those persons who served on the Information System Task Force who have made this new information system as effective as we find it to be. We are continually aware of the special contribution made by those institutional officials too numerous to list who fill out the forms providing the data. Joanne Branscum spent many hours developing both the data and analyses for this report, and many of those hours were in the evenings and on weekends. She was assisted by her supervisor, Dr. Tom Spencer. Wanda Cockrell and the production staff have tirelessly worked the report's contents through its many different stages of development with skill and patience. To all of these we express our appreciation and recognize our debt, but it is ADHE which must accept responsibility for the contents of the report, including any errors therein.

Executive Summary

This report is on geographic and institutional origins of students at Arkansas state and independent colleges and universities in the fall of 1980. Geographic origin is the legal residence of a student when admitted to an institution and it does not change during a student's enrollment at that institution. The institutional origin of undergraduate transfer students, graduate students and first professional students is the institution a student attended prior to enrollment at the current institution. An undergraduate is considered a transfer student for only one semester after enrolling at the new institution.

The data on geographic origin indicate wide variations in the geographic sources for students among institutions. Among the state four-year institutions, the University of Arkansas at Fayetteville drew 3% or more of the 1980 high school graduates from 57 Arkansas counties while, at the other extreme, the University of Arkansas at Little Rock drew 3% or more from only four counties. With the exception of the Fayetteville and Medical Sciences campuses of the University of Arkansas, all of the state four-year institutions drew most of their first-time-entering students from surrounding counties from which at least 3% of the graduates were attracted and they attracted smaller proportions from out-of-state. The University of Central Arkansas drew the lowest percentages of first-time-entering students from out-of-state, with 2%, while the University of Arkansas at Pine Bluff attracted the highest percentages from out-of-state, 28%.

The community colleges and Southern Arkansas University--El Dorado Branch drew intensely from a small group of counties. They drew 3% or more of the high school graduates from only one to six counties, but these accounted for more than 75% of their first-time-entering enrollment. Southern Arkansas University--Technical Branch and Arkansas State University—Beebe Branch attracted students less intensively from nearby counties, drawing from larger geographic areas.

The independent four-year institutions also attracted their students from larger geographic areas. As a general rule they attracted 3% of the high school graduates from fewer Arkansas counties, but drew more heavily from other Arkansas counties and from other states. However, the variances among the independent four-year institutions are great as seen in out-of-state students varying from 8% of the first-time-entering students at Hendrix College to 77% at John Brown University.

When the data are arranged by county to show approximate percentages of high school graduates attending Arkansas institutions of higher education, wide variations among the counties are revealed. Statewide, the 1980 fall full-time, first-time-entering students equaled 43% of the 1979-80 high school graduates. However, county percentages ranged from a low of 14% in Little River County to a high of 88% in Phillips County. The high percentages for counties having community colleges support the thesis that community colleges serve a clientele different from the normal college-going group.

New data on the institutional origin of undergraduate students transferring into Arkansas institutions are quite interesting even though some analyses must await more complete reporting. There were several instances where an institution both sent to and received its largest numbers of transfers from the same institution. Clearly, proximity played a major role in transfer relationships among institutions.

The institutional origin of graduate and first professional students is also presented for the first time. Most state institutions attracted the largest numbers of entering graduate and first professional students from their own graduates while the smaller graduate programs at the independent institutions attracted students from other institutions. At the University of Arkansas at Little Rock the largest numbers of law students came from its own graduates and the University of Arkansas at Fayetteville. The largest numbers of first-time-entering medical students were from the University of Arkansas at Fayetteville and the University of Arkansas at Little Rock.

GEOGRAPHIC AND INSTITUTIONAL ORIGIN OF ARKANSAS COLLEGE STUDENTS, FALL 1980

This report contains information regarding the geographic origin and institutional origin of students. Geographic origin is the legal residence of a student at the time of original admission to an institution of higher education. The geographic origin of a student does not change during the student's college career. The institutional origin of a tranfer student is the institution a student attended prior to the first semester of enrollment at the present institution. A student is considered a transfer student for only one semester after transferring.

GEOGRAPHIC ORIGIN OF FULL-TIME, FIRST-TIME-ENTERING UNDERGRADUATE STUDENTS

Institutional Draw Areas

A first-time-entering undergraduate student is an undergraduate student entering the institution for the first time with no academic credit attempted or earned at another institution. An institution's draw from a particular county is determined by dividing the fall, full-time, first-time-entering undergraduate students from a particular county by the previous year's high school graduates from that county. In the enrollment projection system now in use, these counties from which an institution draws at least 3% of the high school graduates are termed its "draw area" and the entering freshmen are projected from high school graduates from this draw area. Since, in both reality and the projection system, sophomores survive from freshmen, juniors survive from sophomores, and seniors survive from juniors, this draw area is the primary source for an institution's undergraduate enrollment.

For most state institutions and several independent institutions, the draw area, the counties from which each institution drew at least 3% of the high school graduates, tended to cluster around the home county of the institution. A review of the home county and the number of counties from which the institution drew 3% of the high school graduates, as shown in Table 1, will indicate the differences in the sizes of the drawing areas of the various institutions.

For detail on the individual institutions' attraction of students, the numbers of full-time first-time-entering students from each county are shown in Tables 12 through 15 in the Appendix; the numbers of 1980 high school graduates for each county are shown in the first column of Table 4; the fall 1980 full-time, first-time-entering students as a percentage of 1980 high school graduates for each institution and each county are shown in Tables 16 through 19 in the Appendix and maps displaying these percentages by county and the resulting drawing area for each institution are shown in Figures 5 through 8 in the Appendix.

Arkansas Public High School Graduates, Projections to 1996-97, published by the Arkansas Department of Higher Education (ADHE) in April 1981 indicated that there are wide variations in the expected increases or decreases in numbers of high school graduates among the Arkansas regions and counties. As can be seen in Figure 1, taken from this previous study, the east region of Arkansas is facing projected declines in high school graduates of 23% by 1988-89 while the North region can look forward to increases of about 10%. Obviously the enrollment outlook for an institution drawing from east Arkansas is quite different from that anticipated by an institution drawing from north Arkansas. That report showed even greater anticipated variations among the counties and regions of Arkansas by 1996-97, the end year of the projections. The projections by county are reproduced in Table 20 in the Appendix.

TABLE 1. PERCENT FULL-TIME FIRST-TIME-ENTERING UNDERGRADUATES FROM 3I DRAW AREA, OTHER ARKANSAS COUNTIES AND OUT-OF-STATE BY INSTITUTION

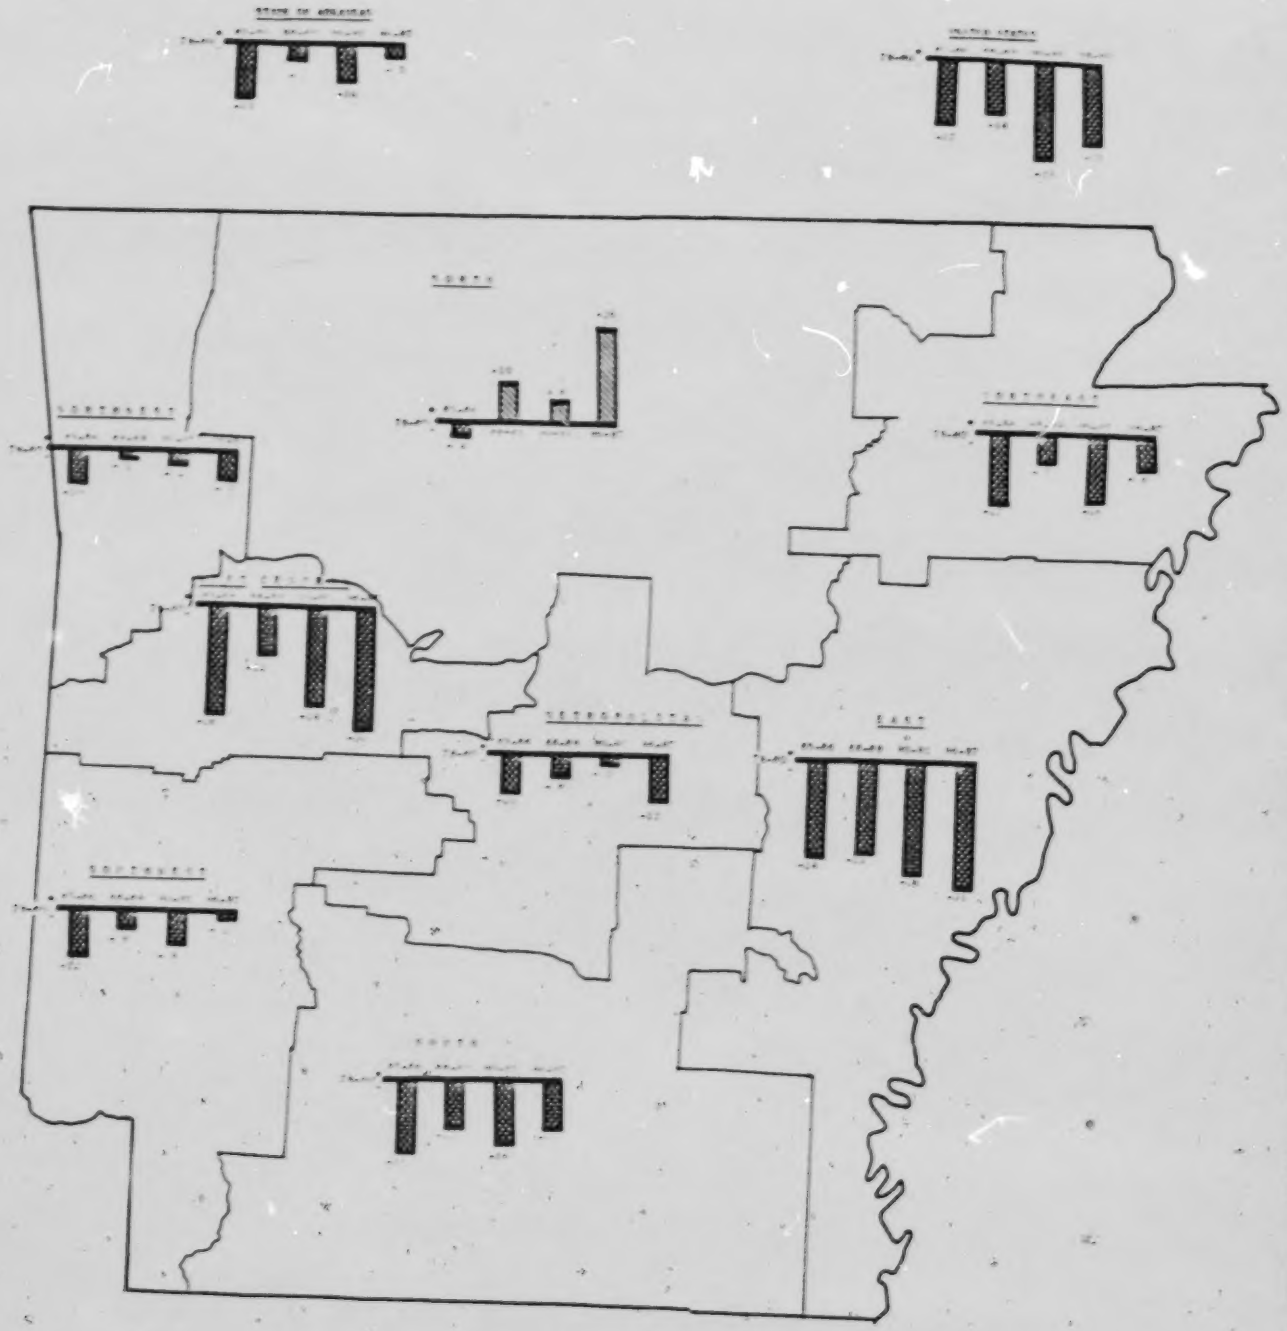
FIGURE 1. COMPARISON OF CHANGES IN HIGH SCHOOL GRADUATES FOR ARKANSAS REGIONS, ARKANSAS, AND UNITED STATES, 1979-80 COMPARED TO 1985-86, 1988-89, 1990-91, AND 1996-97



State Institutions

There are 19 state institutions in Arkansas: 9 four-year institutions, 1 medical sciences campus, 3 two-year branch campuses and 6 community colleges. At most state institutions 80% to 90% of the full-time, first-time-entering undergraduates came from Arkansas counties in which these first-time enrollees represented at least 3% of the high school graduates. Therefore, the counties from which an institution draws at least 3% of the high school graduates are its *de facto* primary service area.

The nine state four-year institutions are: Arkansas State University - Jonesboro (ASUJ), Arkansas Tech University (ATU), Henderson State University (HSU), Southern Arkansas University - Magnolia (SAUM), University of Arkansas - Fayetteville (UAF), University of Arkansas at Little Rock (UALR), University of Arkansas for Medical Sciences (UAMS), University of Arkansas at Monticello (UAM), University of Arkansas at Pine Bluff (UAPB), and the University of Central Arkansas (UCA).

UAF served virtually the whole state, drawing 3% of the high school graduates from 57 of Arkansas' 75 counties. UCA ranked second among Arkansas colleges and universities according to the number of counties in each institution's 3% draw area. This institution attracted over 3% of the high school graduates from 37 Arkansas counties. ASUJ, HSU, and ATU also served much of the state, drawing 3% from 28, 16, and 15 counties, respectively. SAUM, UALR, UAMS, UAM, and UAPB drew 3% of the high school graduates from ten or fewer counties. Because students generally transfer to UAMS after receiving their basic formal training at some other institution, there were only six full-time, first-time-entering undergraduate students.

Among the state four-year institutions all but UAPB and UAMS drew at least 80% of their full-time, first-time-entering undergraduate enrollment from within the state. UAPB is a traditionally black institution and most of its out-of-state students are children of UAPB

alumni who have left the state, but still retain their relationship with the institution. UAMS had a total of six full time, first-time-entering undergraduate students with two coming from out-of-state. This accounts for the high out-of-state percentage.

The six state community colleges are East Arkansas Community College (EACC), Garland County Community College (GCCC), Mississippi County Community College (MCCC), North Arkansas Community College (NACC), Phillips County Community College (PCCC), and Westark Community College (WCC). These are locally oriented institutions with elected boards of trustees and local taxing districts for capital funds. Each community colleges had as its draw area its county district which, with the other "3% counties", consisted of no more than six counties. All but MCCC drew over 80% of the institutions' full-time, first-time-entering undergraduates from its 3% draw areas. MCCC drew 77% of its full-time, first-time-entering undergraduate students from Mississippi County, 4% from four other Arkansas counties and 19% from outside the state. This relatively high out-ofstate proportion is understandable given the institution's location in the northwest corner of the state in a county bordering both Missouri and Tennessee.

The three two-year branch campuses in the state are Arkansas State University-Beebe Branch (ASUB), Southern Arkansas University-El Dorado Branch (SAUE), and Southern Arkansas University-Technical Branch (SAUT). Although all are branches of four-year institutions, these institutions have little else in common. ASUB was originally established as a junior agricultural college and was later merged with Arkansas State University - Jonesboro (ASUJ). ASUB's programs are primarily in the baccalaureate transfer areas of liberal arts and agriculture. SAUE was created by the 1975 General Assembly. Legislation creating this institution indicated that it should have programs common to the community colleges. Both ASUB and SAUE drew students in a pattern similar to that of the community colleges. The 3% draw area for ASUB and SAUE provided over 70% of each institutions' full-time, first-time-entering undergraduate enrollment. SAUT offers

several high technology occupational programs, some of which are unique in the state. SAUT's draw from 39 counties outside the 3% draw area can be partially attributed to these unique programs.

Independent Institutions

Arkansas has nine four-year and three two-year independent colleges and universities. The four-year independent institutions are: Arkansas Baptist College (ABC), Arkansas College (AC), Central Baptist College (CBC), College of the Ozarks (CO), Harding University (HU), Hendrix College (HC), John Brown University (JBU), Ouachita Baptist University (OBU), and Philander Smith College (PSC). The two-year institutions are Crowley's Ridge College (CRC), Shorter College (SC), and Southern Baptist College (SBC).

The independent colleges varied as to the nature of their geographic drawing areas, but they generally attracted students less intensively and from a larger geographic drawing area than the state institutions. Two of the independent institutions, HU and JBU, drew heavily from outside the state with approximately 70% of their full-time, first-time-entering undergraduate headcount from out-of-state. At the opposite end of the geographic distribution spectrum, SC drew 91% of its students from Pulaski County. Of the remaining independent institutions, at least 65% of the students listed Arkansas as their geographic origin.

GEOGRAPHIC ORIGIN OF UNDERGRADUATE STUDENTS, FALL 1980

State of Origin

In the fall of 1980 Arkansas institutions of higher education had an in-migration of 8,584 students, representing 13% of the total Arkansas undergraduate college and university enrollment. Figure 2 displays the total number of undergraduate students from each state attending

Arkansas colleges and universities in the fall of 1980. The states contributing over 200 students to Arkansas institutions were California, Texas, Oklahoma, Louisiana, Missouri, Mississippi, Tennessee, Illinois, Michigan, and Florida. The largest number of students came from Missouri. Arkansas colleges and universities had 792 foreign students enrolled in the fall of 1980. The geographic origins for total fall 1980 undergraduate students are displayed in Tables 21 through 24 in the Appendix.

Tables 2 and 3 display percentage of in-state and out-of-state headcount for fall 1975 through fall 1980. Of the four-year state institutions, UAF attracted the largest number of out-of-state students, with 19% of the institution's total fall 1980 enrollment being from outside the state. Among the state community colleges, MCCC received the largest percentage of out-of-state students. Approximately 13% of its enrollment came from outside the state and of those out-of-state students 11% came from Missouri.

Only two of the independent institutions, ABC and SC, drew less than 10% of the institution's total undergraduate enrollment from outside the state. JBU and HU drew the largest number of out-of-state students with 70% of each institution's fall 1980 enrollment being from out-of-state. The remaining eight independent institutions attracted between 10% and 25% of the total undergraduate enrollments from outside the state. Out-of-state students were more heavily concentrated in the independent institutions which accounted for 44% of the out-of-state students while serving only 14% of the total enrollment in Arkansas institutions.

County of Origin

Figure 3 displays the total number of undergraduate students from each county attending Arkansas colleges and universities in the fall of 1980. The largest number of students, 11,291, came from Pulaski County and the smallest, 102, came from Calhoun County.

TOTAL ARKANSAS	57,846

Table 4 displays 1979-80 high school graduates, 1980 Arkansas population, and fall 1980 full-time, first-time-entering undergraduate students by county. The ranking beside each county displays how the county ranked among the 75 Arkansas counties with respect to population, high school graduates and full-time, first-time-entering undergraduate students. For example, a ranking of one in each category for Pulaski County indicates that Pulaski had the largest population, number of high school graduates and full-time, first-time-entering undergraduate students. Arkansas had a population of 2,285,513 in 1980, 29,052 high school graduates in 1979-80 and 12,481 fall 1980 full-time, first-time-entering undergraduate students in Arkansas colleges and universities.

Figure 4 displays fall 1980 full-time, first-time-entering undergraduate students as a percentage of 1979-80 high school graduates by county of origin. Although first-time-entering undergraduates did not consist totally of 1979-80 high school graduates, there should be a high degree of correlation since 75% or more of the total first-time-entering undergraduate students attending Arkansas institutions were 19 years of age or under. Statistics regarding age of students and geographic origin of students were taken from ADHE 05-0, Age of Students and ADHE 07-1, Geographic Origin of Undergraduate Students. ADHE Report 80-7, Characteristics of Arkansas College Students, Fall 1980, soon to be released, will provide more analysis of this information.

These data indicated the varying extents to which high school graduates from the individual counties utilize and were served by institutions of higher education. The variances among the counties were startling. Phillips County, with 88%, had the highest percentage of fall 1980 full-time, first-time-entering students at Arkansas colleges compared to 1979-80 high school graduates. While the 88% at Phillips County may have overstated the high school graduates attending college, this can be assumed to be a fairly accurate percentage since PCCC alone drew 67% of the full-time first-time-entering undergraduate

FIGURE 4. FALL 1980 FULL-TIME FIRST-TIME-ENTERING UNDERGRADUATE STUDENTS IN ARKANSAS INSTITUTIONS AS A PERCENTAGE OF 1979-80 HIGH SCHOOL GRADUATES, BY COUNTY

students and of that 67%, 75% were 19 years of age or under. Community colleges on the whole have caused a tremendous increase in the total college-going rate in their prime service areas. Phillips County's high percentage of high school students attending college can be attributed to the existence of a community college within the county. A community college has as its primary responsibility providing a wide range of service activities to its geographically more limited service area. On the other hand, four-year institutions have a responsibility to provide a more limited range of services to a wide geographic area. For example, UAF, the largest four-year institution in Arkansas is located in Washington County and Washington County in the fall of 1980 had a college going-rate of 40% which was below the state average of 43%. That this should occur in Washington County is understandable since UAF has a state-wide focus, rather than a focus on Washington County.

Little River County, with 14%, had the lowest percentage of any county and Miller County, with 15%, had the next lowest percentage. These low percentages of enrollment at Arkansas institutions were due to both Little River and Miller counties being bordered by two other states and being involved in a tuition agreement policy with Texarkana Community College which permits students to enroll at residents in-district fees which are even below fee rates at Arkansas institutions.

INSTITUTIONAL ORIGIN OF UNDERGRADUATE TRANSFER STUDENTS

Institutional origin of transfer student information has not been collected previously. Westark Community College, Arkansas Tech University, University of Arkansas - Fayetteville, Arkansas Baptist College, and Shorter were unable to provide information concerning transfer students at their institutions, but information for these schools will be available for the 1981-82 school year.

A first-time-entering undergraduate transfer student is an undergraduate student entering the institution for the first time who has previously attempted or earned academic credit at another institution. A person is considered a transfer student by the new institution for only the first semester after transferring.

Table 5 displays the number of students transferring to each Arkansas institution from other in-state institutions, the number of students transferring from each Arkansas institution to other institutions in-state, the institution from which the largest number of students transferred, and the institution to which the largest number of students leaving the institution went. For example, ASUB had 27 students transfer to that institution from other Arkansas colleges and in turn 165 ASUB students transferred to other Arkansas colleges for the fall 1980 semester. The largest number of ASUB's transfer students came from UCA and the largest number went to ASUJ. For a more detailed accounting of transfer students see Tables 25 through 28 in the Appendix. The total number of students transferring to other institutions will tend to be understated since five institutions were unable to provide information concerning fall 1980 transfer students.

Generally, more students transferred to four-year institutions than to two-year institutions. Among state four-year institutions which reported data, the greatest number of students transferred to UALR. Among the four-year independent institutions, the greatest number of students transferred to OBU. The largest number of transfer students attending a state two-year institution was 161 at GCCC. At the two-year independent institutions SBC had the largest number, with 16 students transferring to that school. Many institutions both sent and received the most students from the same institution. For example, EACC received its largest number of transfers from ASUJ and the largest number of students transferring from EACC went to ASUJ. Further, PSC received most of its transfers from UALR and most of the students transferring from PSC went to UALR. In both instances geographic proximity is the likely explanation for this phenomenon.

TABLE 5. TRANSFER STUDENTS AT ARKANSAS INSTITUTIONS OF HIGHER EDUCATION

[1] Information for WCC, ATU, UAF, SC and ABC unavailable as of 8-1-81

Table 6 displays total transfers, out-of-state transfers, and in-state transfers as a percentage of total undergraduate headcount enrollment for state institutions. Among the state institutions, UAMS had the largest percentage of its enrollment transferring from other institutions. Ninety-seven percent of UAMS' total fall 1980 enrollment transferred from other institutions. A majority of the programs offered by UAMS require post-secondary education credits which are usually gained at other institutions prior to being admitted to the institution. In all cases at the state institutions, less than 10% of the total headcount enrollment transferred from out-of-state institutions to in-state institutions.

TABLE 6. TOTAL UNDERGRADUATE TRANSFERS, IN-STATE TRANSFERS AND OUT-OF-STATE TRANSFERS AS A PERCENTAGE OF TOTAL UNDERGRADUATE HEADCOUNT, STATE FOUR-YEAR INSTITUTIONS, FALL 1980[1]

Institution	Total	In-State	Out-Of-State
State Four-Year			
ASUJ	7.3%	4.7%	2.6%

Average	9.6	6.6	3.0

[1]Information for ATU, UAF and WCC unavailable as of 8/1/81.

Table 7 displays for independent institutions in-state and out-of-state transfer students as a proportion of total undergraduate head-

count, fall 1980. PSC had the highest percentage of its total fall 1980 headcount transfer from other institutions. None of the independent institutions had greater than 15% of their total enrollment consisting of transfer students. The two-year independent institutions in particular had a limited number of transfer students. CRC had two transfer students, both of whom were from outside the state. SBC had 28 transfer students, 11 from outside the state. Of the remaining 17 students, 7 were from ASUJ.

INSTITUTIONAL ORIGIN OF FIRST-TIME-ENTERING GRADUATE STUDENTS

Table 8 displays the institutional origin of first-time-entering graduate students for four-year state institutions for fall 1980. A student who has been awarded an earned baccalaureate or first professional degree who is entering any institution classified as a graduate level student for the first time is reported as a first-time-entering graduate student. With the exception of UALR, most state institutions

were the major suppliers of their own graduate students. UALR received more graduate students from UAF than from its own graduates. See Table 29 in the Appendix for institutional origin of all graduate students for four-year state institutions.

Table 9 displays the institutional origin of first-time-entering graduate students for four-year independent institutions for fall 1980. Only three independent institutions, CO, HU, and OBU, have graduate programs. Among the independent institutions, OBU attracted the largest number of graduate students from other institutions. Ten students from ABC and three from PSC attended graduate school at OBU.

INSTITUTIONAL ORIGIN OF FIRST-TIME-ENTERING FIRST PROFESSIONAL STUDENTS BY PROGRAM

Table 10 displays first-time-entering first professional students by program. There are two first professional programs offered at Arkansas institutions: law at UAF and UALR and medicine at UAMS. The UALR Law School received nearly half of its in-state students from UALR and UAF. The UAMS School of Medicine received approximately 50% of its students from UAF and UALR.
